NEW TRIUMPH TULIPS

A new, giant hybrid race of Tulips developed after many years of careful breeding and crossing the Early Tulips with the Darwins. The flowers are of immense size, of great substance, and come into bloom fully two weeks before the Darwins. Cultivation the same as for Darwins. See page 6.

Tulip-Garden at our Dedham (Mass.) nurseries, with over 20,000 Tulips in 300 different named varieties, in full bloom, spring, 1929

Farquhar's Giant Darwin Tulips

The Giant Darwins combine immense size with perfection of bloom, and are carried gracefully erect on fine stems 2 to 3 feet tall. Colors range from purest white to blush, pink, salmon, shades of red, maroon, purple and almost black; recently some very fine yellows have been introduced of which we offer the choicest varieties. Darwins bloom with the columbines in late May and make a glorious display for several weeks. Effective grouped in front of shrubbery and evergreens, or planted in beds or perennial borders.

The bulbs we offer are of the finest quality and will produce magnificent blooms. Plant them in October or November, 5 to 6 inches deep and 5 to 6 inches apart; a light mulch should be provided after the first hard freeze.

When forcing Darwins indoors, the soil and general treatment recommended for hyacinths may be used. Plant three to five bulbs, according to size, in a 5-inch pot, or ten to twelve in an 8-inch pan. The varieties marked with an asterisk (*) are best for forcing, and are equally desirable for outdoor culture.

Six bulbs at dozen rate; 25 at 100; 250 at 1,000. If wanted by Parcel Post, add postage at zone rates; weight per 100 bulbs, 7 lbs.

Parrot Tulip

Bed of Farquhar's Special Rainbow Mixture of Single Early Tulips

Single Early Tulips

These well-known favorites are extensively planted where early-flowering effects are desired, and from early April well into May there is no other flower that can rival the Single Early Tulips in cheerfulness and brilliance of bloom. In the cool of the early spring they bloom on and on, their lasting qualities being truly remarkable. They are invaluable for forcing or for masses in large beds of one color or mixture, but they look even better when planted in clumps and small masses against an evergreen background. Blooming with the narcissi, they add the missing shades of red and pink so lacking in other spring flowers, and thus provide an interest and variety which could easily be lacking if they were not planted.

Their culture both indoors and out is exactly the same as that suggested for Darwins on page 1, except that the bulbs may be lifted and dried off two to three weeks sooner, enabling the annuals and other plants which are required for summer bloom to be planted in time to make a fine start.

Those marked with an asterisk (*) are the best for forcing. The letters A, B, C indicate the relative time of flowering.

Not less than 6 bulbs at dozen rate; 25 at 100 rate; 250 at 1,000 rate. If wanted by Parcel Post, add postage at zone rates; weight per 100 bulbs, 7 lbs.

FARQUHAR'S "TOP-ROOT" HYACINTHS

Culture of Hyacinths

HYACINTHS IN POTS.—The soil for bulb-forcing should be a compost of ordinary, rich garden loam, well-rotted manure, leaf-mold, and sand—if manure is not available substitute Fine Ground Bone. If bulbs are to be potted singly, standard 5-inch clay pots are the proper size, or four or five bulbs for an 8-inch bulb-pan. Provide drainage with pieces of broken pots. Break off any offsets which may appear at the base of the bulbs and cover with the soil so that the top of the bulb will be about half an inch below the surface. The filled pots may be placed in a coldframe or buried in a bed of sifted ashes and watered occasionally. When well rooted, which should be in from six to eight weeks, the bulbs may be brought indoors and forced, keeping fairly cool for two to three weeks, after which they may be given gentle bottom heat and liquid fertilizer, with plenty of water, sunshine, and ventilation on mild days.

HYACINTHS IN THE OPEN GROUND.—The bed should be well spaded and plenty of well-rotted manure or Fine Ground Bone may be thoroughly worked in. The bulbs may be planted from October to early December; the early planted bulbs produce the largest flower-spikes. Set the bulbs at least 6 inches below the surface and about 6 inches apart. Protect during winter with leaves, straw, and pine boughs.

If wanted by Parcel Post add postage at zone rates; weight per doz. bulbs, 3 lbs.

LILIES FOR FORCING

If to be sent by Parcel Post, add postage at zone rates; weight per dozen bulbs, 10 lbs.

The bulbs may be potted from August onward in a compost of equal parts turfy loam, leaf-mold, rotted cow-manure, and sand. It is best to start them in pots not exceeding twice their own diameter, in which they may remain until started 8 inches or more. They should be transferred then to larger pots in which to bloom, exercising great care not to disturb the roots or break away the soil from about them, and setting them considerably deeper in the larger pots. This method prevents the soil from becoming sour, and enables the roots forming at the base of the stem to become feeders, greatly increasing the number and size of the blossoms.

Farquhar's Hardy Perennial Plants

Varieties suitable for autumn planting. Refer to our Garden Annual for complete list of Perennial Plants

The old-fashioned hardy flowers are deservedly popular. No feature of the garden can be more satisfactory than a well-arranged Hardy Plant border, providing, from April to November, a continuous succession of charming flowers much varied in character and interest. The Hardy Plants have the advantage of permanency, requiring only cultivation, enriching, a slight mulch during winter, and occasional checking of the more robust growers to keep them in good condition for years. Prepare the border by digging it deeply and fertilizing it well, before planting. Plant them in groups rather than in lines or blocks, and arrange the tall kinds in the background.

A great deal of pleasure may be had by working out striking and harmonious color relationships as well as devising a selection of plants which will succeed each other in bloom, keeping up a continual display throughout the season.

We limit our list to varieties which have been found generally hardy and most desirable for the severe climate of New England.

Where earlier flowers are desired, introduce groups of Narcissi and other bulbs, which bloom in April and May, and for variety's sake, such summer-blooming bulbs as Montbretias, Gladiolus, and Lilies.

The plants marked with an asterisk (*) are varieties suitable for the rock-garden. We have carefully prepared a list of rock plants that thrive in this locality and will be glad to send a copy on request.

No charge for boxes and packing, nor for delivery to any express, freight, or steamship line in Boston. For Parcel Post information, see page 48

Delphiniums (Hardy Larkspurs)

These are the handsomest blue flowers for the garden. They are unsurpassed in decorative effect, and have much value for cutting, especially those of the *Belladonna* type. They like deep, rich soil and plenty of lime. Give them bone-meal in early spring and again after their first flowering, but do not cut them to the ground when the first flowers have faded, as so many people advise. Merely remove the seed-pods and upper portion of the stalk. The new growth from the ground will soon cover the cut ends and old leaves and give a fine second crop of bloom.

PEONIES

Everybody enjoys the glory of the Peony season, when the giant, fragrant flowers adorn almost every country dooryard. But the old-time varieties have been much improved, and the better sorts now available are revelations of beauty and abundance. Peonies are among the hardiest of plants and are exceedingly easy to grow, requiring only sunshine and water during the growing season, and a deep, rich soil. When enriching the ground, fresh manure should not be placed near the roots. Planting too deep is a frequent cause of shy flowering, and therefore the roots should be planted so that the eyes are 2 to 3 inches below the surface.

For complete list of Ornamental Shrubs, see our Garden Annual

Shrubs are the most important group of plants to produce home-like surroundings and picture-like effects in the garden. They should be chosen not only for graceful habit and season of blooming, but for their variously tinted leaves and berries. Plant them liberally and thickly for quick effects, and thin them out as they begin to crowd each other. They appreciate deep preparation of the soil and liberal feeding with manure or other fertilizer. Keep the ground beneath them cultivated, and do not plant them in holes cut in the sod. Prune them as they increase in age, in the winter cutting out old, decrepit canes entirely, and refrain from snipping at the ends of the shoots. Encourage new growth from the base of the plants at all times.

Early-flowering shrubs should be pruned immediately after they have finished blooming to encourage new growth to produce flowers the next spring. If they are pruned in the winter, the buds which were formed the previous summer will be cut off and the quantity of bloom will be seriously reduced.

Late-flowering shrubs, such as Altheas and Hydrangeas, may be pruned in winter or spring because the flower-buds are formed the same season as they bloom.

Broad-leaved Evergreens are generally best with no pruning at all.

Do not attack border shrubs as one would a privet hedge or a box tree. Allow the shrubs to assume their natural, graceful form but do not permit them to become old and crowded at the base. Keep them always growing new and fresh wood from the roots.

HARDY VINES AND TRAILING PLANTS

Hardy vines are widely useful for concealing unsightly objects, such as tree stumps, garages, ugly fences, stone piles, and rough ground. They may be trained to screen unpleasant views or to separate various portions of the garden. In many cases they are used to increase the beauty of walls, enhancing the established, permanent quality of homes and grounds; they are invaluable for covering arbors and pergolas, for screening porches, and draping along balconies. Their care is simple. Prepare the ground well and deeply, see that the plant is not too much deprived of water, and that it is kept under control by judicious pruning from time to time.

Hardy Evergreens and Conifers

We Make No Charge for Packing on Nursery Stock

Juniperus communis Hibernica

Evergreens may be safely planted in spring and again in autumn from August on. They are shipped with the soil on the roots, held firmly in place by burlap. This ball of soil should never be allowed to dry out. The holes should be dug large enough to receive the ball and made rich and friable at the bottom with leaf mold, peat, or very old, decayed manure; fresh manure should not be used in the hole. Set the balled plant in the hole and remove the burlap carefully, or merely slit it to shreds with a sharp knife. Fill in partly with fine, rich soil, no manure, and then fill the hole with water. Finish filling with good soil, and water again. Stake the tree firmly to keep it in position against adverse winds, and scatter leaves or straw over the excavation to prevent its drying out. Water the soil thoroughly, frequently. Give it a thorough soaking—do not merely sprinkle the branches.

Rhododendron Catawbiense

RHODODENDRONS

The ground selected for the planting of Rhododendrons should be prepared to a depth of at least 2 feet, with a compost of one-half light garden soil and one-half rotted peat. If the soil should happen to be heavy clay, good sharp sand should be mixed with it in liberal quantities. Rhododendrons will not flourish in limestone soils. After the flowers have fallen, it is very important that the seed-pods be removed immediately, so that the plants may make their full growth and mature their flower-buds for the following year.

Granulated Peat Moss is an excellent all-year-round mulch for azaleas, Rhododendrons and kalmias. Large bale, \$4.00.

Unnamed Hardy Hybrids

Mixed Colors. We grow a large assortment of the best large-flowering, hardy varieties. These are the most satisfactory of all Rhododendrons for general planting, for lawn groups, and for borders near the residence. The colors are brilliant, running chiefly in white, pink, rose, scarlet, and crimson.

Fruit Trees

The Fruit Trees we offer are excellent young stock. When received the trees should be planted at once in rich, prepared soil, the roots being carefully separated and spread. If dry weather follows planting, the trees must be watered and mulched. Branches of last season's growth should be well cut back, thus encouraging the vigorous growth of new shoots. Standard apple trees will need plenty of room when they grow up, so they should be planted 30 to 40 feet apart. For the first few years, peaches or plums may be grown between them, but these "fillers" must be removed when the apples need the space.

Not less than 5 plants of each variety sold at the 10 rate; 25 at the 100 rate

Farquhar's Special Grass Seed Mixtures

Farquhar's "Evergreen" Lawn Mixture

Farquhar's "Shady Place" Mixture

FARQUHAR'S "EVERGREEN" LAWN SEED

A mixture of the finest American and European grasses adapted to lawn-making. The formula for this mixture is the result of a life-time of practical experience in making and maintaining lawns. Neither pains nor expense are spared in obtaining grasses of high vitality and purity. It is our constant aim to make Farquhar's Evergreen Lawn Grass the best, purest and most permanent Lawn Grass sold. For the formation of new lawns sow not less than 100 pounds per acre. One pound will sow a plot 20 x 20 feet or 400 square feet. For renovating existing turf, use one-half this quantity. (Bus. 25 lbs.) Lb. 65c.; 5 lbs. \$3.15; 10 lbs. \$6.25; 100 lbs. \$60.00.

FARQUHAR'S "BOSTON PARKS" LAWN SEED

This formula has been used for many years in the Boston Park Department and in the Metropolitan Parks of Massachusetts. It is unquestionably one of the best mixtures for parks or where a free-growing, hard-wearing turf is desired. Sow not less than 80 pounds per acre and in many cases 100 pounds will be an advantage. Lb. 65c.; 10 lbs. \$6.25; 100 lbs. \$60.00. (25 lbs. and upwards at the 100-lb. rate.)

FARQUHAR'S "SHADY PLACE" MIXTURE

This is a mixture of extra-fine grasses adapted for growing in the shade and under trees. We recommend the use of this mixture wherever other grasses, on account of shade, have failed to make a close sward. Sow at rate of one pound to 300 sq. ft. Lb. 60c.; 5 lbs. \$2.90; 10 lbs. \$5.75; 100 lbs. \$55.00.

FARQUHAR'S "TERRACE" MIXTURE

A mixture of strong, deep-rooted grasses for banks or terraces. Although the grasses are strong and deep-rooted, they will produce a fine green velvety surface, and also prevent washing away during heavy rains. Use one pound to each 300 square feet. Lb. 60c.; 10 lbs. \$5.75; 100 lbs. \$55.00.

FARQUHAR'S "ATHLETIC FIELD" MIXTURE

A special mixture of grasses producing a close, matted turf of great resiliency. Many leading athletic fields in New England are using this mixture. Sow at rate of 125 to 150 pounds per acre. Lb. 70c.; 5 lbs. \$3.40; 10 lbs. \$6.50; 100 lbs. \$60.00.

FARQUHAR'S "FAIRGREEN" MIXTURE

This is composed mainly of perennial native grasses and two very important European grasses which have proven of great value for fairgreen use. They are all of dwarf, spreading growth, forming a close, velvety surface which improves from year to year if given proper care. It contains no clover, which is objectionable on account of making the surface slippery. Use about 150 pounds to the acre. Lb. 65c.; 100 lbs. \$60.00; 1,000 lbs. \$550.00.

FARQUHAR'S "PUTTING-GREEN" MIXTURE

The hardiest and finest low-growing grasses are contained in this mixture. It produces a beautiful and lasting green turf calculated to withstand hard tear and wear. Sow one pound to each 200 square feet, 75 to 100 pounds for the average green. Lb. 90c.; 10 lbs. \$8.50; 100 lbs. \$80.00.

FARQUHAR'S "TENNIS-COURT" MIXTURE

A mixture of fine grasses, consisting of those varieties which are adapted to produce a close, elastic turf. Use at rate of one pound to 200 square feet. Lb. 90c.; 10 lbs. \$8.50; 100 lbs. \$80.00.
